EDUCATION

University of North Carolina at Chapel Hill

Chapel Hill, NC

B.S. in Computer Science and B.S. in Statistics and Analytics — GPA 3.945/4.0

Aug. 2024 – May 2028

Related Coursework: Discrete Math, Linear Algebra, Multivariable Calculus, Probability, Optimization, System Programming, Computer Organization, Data Structures, Algorithms & Analysis, Data Science, Computer Vision, Robotics, Computer Models/Languages

Dean's List Fall 2024-Fall 2026

EXPERIENCE

Chief Data Officer

June 2026 – Present

Venuehorn

Remote

- Engineered and managed cloud data pipelines on AWS containing 100k+ venue records, scaling cross-departmental access and enhancing data availability for the backend/frontend team.
- Addressed persistent missing data fields by integrating Gemini AI into an automated data population tool, capturing 8,000 additional data cells monthly with zero manual review needed.
- Synthesized self-gathered competitive web data into predictive behavioral models to identify key performance drivers, steering cross-functional venue strategy during weekly leadership consultations.
- Directed an intern team of 10+ data analysts by aligning task assignments with individual strengths and establishing agile milestone tracking, which drove consistent on-time project execution.

Information Technology Support Specialist

Jan. 2025 – Present

UNC Morehead Planetarium

Chapel Hill, NC

- Streamlined IT operations by resolving complex TDX ticketing queues, reimaging workstations, and tracking inventory in Snipe-IT to achieve end-to-end resolution on high-priority tickets.
- Optimized technical support workflows, earning recognition as the top technician for ticket resolution volume during Summer 2025.
- Mentored and onboarded junior student technicians by standardizing operating procedures, increasing overall team resolution efficiency and protocol adherence.
- Monitored and maintained core planetarium infrastructure using PDQ, minimizing system downtime through proactive maintenance and automated patch deployments.

PROJECTS

High-Stakes Poker Tournament Modeling/Analysis | *Python, R*

Jan 2026 – May 2026

- Analyzed 200 hand observations from the 2025 WSOP Main Event to evaluate the validity of "timing tells" as predictive indicators of player behavior.
- Engineered 60+ custom variables, including Monte Carlo-simulated hand strength and bet-to-pot ratios, using Python to standardize complex poker data.
- Applied logistic regression models to identify patterns in decision latency, demonstrating that early-street deliberation significantly correlates with folding tendencies.

NBA Predictive Modeling/Analytics | *Python, R*

Feb 2026 – March 2026

- Developed a robust predictive system for NBA game outcomes (spread, total points, and offensive rebounds) utilizing historical data from 2010-2026.
- Engineered advanced analytical metrics, such as pace-adjusted rebounding pressure, rolling team efficiency ratings, and shooting environment indices.
- Implemented and tuned ensemble machine learning models, including Gradient Boosted Trees and Stacking Ensembles, to optimize forecast accuracy against baseline models.

HACK NC | *Python, Google Maps API, Google Gemini API, Flask, HTML, CSS*

Oct 2024 – Present

- Built a location-guessing game using the Google Maps API and satellite imagery, primarily developing the project in Python
- Integrated the Google Studio Gemini API into a financial budgeting website to scan receipts, automatically categorize expenses, update budgets, and generate financial advice; used Python and Flask for the backend with HTML/CSS for the frontend

TECHNICAL SKILLS

Languages: Java, Python, C, SQL (Postgres), JavaScript, HTML/CSS, R

Frameworks/Libraries: Flask, JavaFX, Google Maps API, Google Gemini API, Neuralnet (R), pandas, NumPy, Matplotlib

Developer Tools: Git, Docker, VS Code, Visual Studio, PyCharm, IntelliJ, Ollama, AWS, MS Office/365
